

Digital Wallet is popular for making payments, offering convenience, speed, and security. Payments with tap eliminates physical cards or cash and makes for faster check-outs. Digital wallets offer enhanced security through tokenization, encryption, and biometric authentication (like fingerprint or facial recognition). Tokenization replaces your actual card information with a unique, randomly generated token that is used for the transaction, making it harder for fraudsters to access your real card details. Add your debit card to your mobile phone today!!!

See instructions below:

Apple Pay:

Instructions for how to add your card to Apple Pay can be found here: <https://support.apple.com/en-us/HT204506>
